ScreenBeam 1100 Plus Wireless Display Receiver

Get app-free wireless presentations from any device with the ability to wirelessly annotate on in-room displays for a natural workflow. Up to four presenters can share content simultaneously for true team collaboration. Integrated HTML-based digital signage is available when displays are not in use.

Integrate ScreenBeam with a UC system and merge these two technologies into a single, collaborative experience of wireless display and UC conferencing for on-site and remote participants. Simply plug in an HDMI cable from the ScreenBeam output directly into the HDMI input of your UC appliance.

A unique multi-network architecture provides three separate network interfaces to give administrators the ability to mix and match the connection paths that meet their needs. Administrators can connect both employees and guests to share content without compromising the company network. There's never an option for traffic between the guest and employee networks so company data is safe.

Designed to be the most flexible wireless presentation and collaboration solution available at a price that can't be beat. Check out how we compare below and **contact us** or watch this **video** to learn more.
